How is our language affected by our ethnicity, gender, and region? How are our conversations and other interactions structured? How does society view and regulate language? How do we use language to present ourselves to others? In this revised and updated second edition of the popular *What Is Sociolinguistics?* Gerard Van Herk explores these and other intriguing questions about language, how we use it, and its relationships to society. Van Herk guides the reader on a tour through the major issues that define the field, including region, status, gender, time, language attitudes, interaction, and style, at the same time exploring the sociolinguistics of multilingualism, culture and ethnicity, language contact, and education. This second edition has been revised and updated to include new and more exercises, discussion questions, and suggested readings, as well as expanded chapters exploring gender duality and Latino English. Key readings are introduced in Van Herk's clear and engaging voice, which accompanies the text throughout, providing an accessible point of entry for

those new to, or less familiar with, sociolinguistics. Chapter summaries and textboxes are similarly employed to signpost and illuminate learning. A companion website features PowerPoint slides for each chapter with suggestions for framing class discussions and exercises, further examples of concepts discussed, additional reading suggestions, and ready-to-go slides for class presentation. Packed with the latest research and practical teaching aids, *What is Sociolinguistics?* Second edition retains the highly-praised character of its predecessor and provides an essential up-to-date text for both students and instructors alike.

The series is a platform for contributions of all kinds to this rapidly developing field. General problems are studied from the perspective of individual languages, language families, language groups, or language samples. Conclusions are the result of a deepened study of empirical data. Special emphasis is given to little-known languages, whose analysis may shed new light on long-standing problems in general linguistics.

In the early 80s, largely due to Chomskys Lectures on Government and Binding and ensuing research, a kind of encompassing theory of empty elements had emerged. This theory was largely concerned with silent subjects, silent pronominals, and various kinds of traces of movement. Since then, however, the picture has become more blurred. More types of empty elements were proposed, ellipsis phenomena began to receive some attention, and interface issues arose. Are silent elements - silent due to deletion (or failure to be spelled out) - at the phonetic interface or are they independently existing items in the lexicon that simply fail to have a phonetic form? Furthermore, silent elements are also ubiquitous in phonology and similar questions arise: can syllables have empty nuclei, can segments fail to be pronounced when they are not properly attached to a slot in a (supra-) segmental structure? "Sounds of Silence" is an attempt to bring together a number of original contributions that all address such questions. And while a new encompassing theory is not yet in sight, this book helps pave the way

Languages differ regarding both the ways they group words into phrases and the surface cues they use to indicate relevant phrasing patterns. Modeling intonation in as many languages as possible has become a central goal of theoretical and empirical linguistics. However, intonational research has only recently begun to devote attention to the analysis of spontaneous speech, one of the central issues of this book. The volume contains eight contributions by international scholars, some of them members of the Research Center on Multilingualism (Hamburg, Germany), all of them experts on intonation and most also on multilingualism. A central goal of the present volume is to expand the cross-linguistic and multilingual perspective of phrasing, focusing thereby on languages from the Romance and Germanic families, among them Catalan, French, German, Italian, Occitan, and Spanish. Within Spanish, special attention is given to several Argentinean varieties, and within Italian, the Neapolitan variety is compared with the standard one."

What sets this collection apart in the literature is its direct, personal style. Experienced supervisors as well as younger scholars speak to beginning researchers in interpreting, and more generally in Translation Studies. The contributors, who are very familiar with the difficulties beginners experience, focus on their needs and anticipate their questions. They reflect, analyze and advise, with illustrations from their own experience. Issues discussed include topic selection, project planning, time management, 'doctoral stress', the use of

the literature, critical reading and book reviews, supervisor-supervisee relations, institutional frameworks for research training, issues in empirical research, theoretical analysis, and the role of small projects. Readers will thus find answers to many personal, institutional and methodological questions, which are common to beginners in many disciplines and in many paradigms.

The volume *Intonation: Analysis, Modelling and Technology* covers the main aspects of intonation, written by international researchers in the field. Following the Introduction, fourteen chapters are organised into five thematic sections: Overview of Intonation, Prominence and Focus, Boundaries and Discourse, Intonation Modelling and Intonation Technology. Each chapter is basically autonomous within a thematic section, but the subject of several chapters extends over more than one thematic section. The combination of a wide range of research areas, as well as interdisciplinary approaches in the study of intonation, makes this volume a unique contribution to the international scientific community. Basic knowledge of Intonation and Prosody is assumed in the context of linguistic and computational backgrounds. Readers may range from students of advanced undergraduate to postgraduate and research levels as well as individual researchers within a variety of disciplines such as Experimental Phonetics, General and Computational Linguistics, Computer Science, and Speech-Language Engineering.

"Previous studies of the Croix de Feu and the Parti Social Français have focused on whether these groups should be considered fascist. In *Reconciling France against Democracy* Sean Kennedy considers them from a variety of perspectives and assesses the extent to which they foreshadowed Jean-Marie Le Pen's Front National." --Résumé de l'éditeur.

This book develops an approach to the causative alternation that assumes syntactic event decomposition and a configurational theta theory. It is couched within the framework of the Minimalist Program and, especially, within Distributed Morphology. Central to the work is the syntax and semantics of canonical external arguments of causative verbs as well as of oblique causers and causative PPs in the context of anticausative verbs in different languages such as Germanic, Romance, Balkan, and Caucasian languages. The book also develops a new account of the origin and nature of the morphological marking which is often found on anticausatives across languages. The main claim is that this morphology is a reflex of a syntactic way to prohibit the assignment of the external theta role. Moreover, the book develops an account about the origin of the implicit agent in generic middles which often bear the same morphology as marked anticausatives. *Sainte Bible en latin et en français, avec des notes littérales, critiques et historiques, des préfaces et des dissertations (etc.)* John Wiley & Sons
