This is the fifteenth volume in the Oratory of Classical Greece. This series presents all of the surviving speeches from the late fifth and fourth centuries BC in new translations prepared by classical scholars who are at the forefront of the discipline. These translations are especially designed for the needs and interests of today's undergraduates, Greekless scholars in other disciplines, and the general public. Classical oratory is an invaluable resource for the study of ancient Greek life and culture. The speeches offer evidence on Greek moral views, social and economic conditions, political and social ideology, law and legal procedure, and other aspects of Athenian culture that have recently been attracting particular interest: women and family life, slavery, and religion, to name just a few. This volume provides introductions, translations, and notes for four speeches found in the Demosthenic corpus that have not been translated in recent times. Against Aristocrates deals with matters of foreign policy involving a mercenary general, Charidemus, and is a valuable source for Athenian homicide law. Against Timocrates involves domestic politics and provides important information about Athenian procedures for enacting legislation. In both speeches, the litigants stress the importance of the rule of law in Athenian democracy and emphasize key ideas, such as the monopoly of legitimate force by the

state, the need for consistency in statutes, and the principle of no punishment without a written law. The remaining two speeches, Against Aristogeiton, are forgeries composed in the Hellenistic period, as Edward Harris demonstrates conclusively through a study of laws and legal procedures and an analysis of style and vocabulary.

Before they were written down, the poems attributed to Homer were performed orally, usually by rhapsodes (singers/reciters) who might have traveled from city to city or enjoyed a position in a wealthy household. Even after the Iliad and the Odyssey were committed to writing, rhapsodes performed the poems at festivals, often competing against each other. As they recited the epics, the rhapsodes spoke as both the narrator and the characters. These different acts—performing the poem and narrating and speaking in character within it—are seldom studied in tandem. Homer in Performance breaks new ground by bringing together all of the speakers involved in the performance of Homeric poetry: rhapsodes, narrators, and characters. The first part of the book presents a detailed history of the rhapsodic performance of Homeric epic from the Archaic to the Roman Imperial periods and explores how performers might have shaped the poems. The second part investigates the Homeric narrators and characters as speakers and illuminates their interactions. The contributors include scholars versed in epigraphy, the history of art, linguistics, and performance studies, as well as those capable of working with sources from the ancient Near East and from modern Russia. This interdisciplinary approach makes the volume useful to a spectrum of readers, from undergraduates to veteran professors, in disciplines ranging from classical studies to folklore.

In this much needed resource, Maryellen Weimer-one of the nation's most highly regarded authorities on effective college teaching-offers a comprehensive work on the topic of learner-centered teaching in the college and university classroom. As the author explains, learner-centered teaching focuses attention on what the student is learning, how the student is learning, the conditions under which the student is learning, whether the student is retaining and applying the learning, and how current learning positions the student for future learning. To help educators accomplish the goals of learner-centered teaching, this important book presents the meaning, practice, and

ramifications of the learner-centered approach, and how this approach transforms the college classroom environment. Learner-Centered Teaching shows how to tie teaching and curriculum to the process and objectives of learning rather than to the content delivery alone.

Decades of research have demonstrated that the parent-child dyad and the environment of the family "which includes all primary caregivers" are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Sam Houston, the Great Designer

There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, How People Learn: Brain, Mind, Experience, and School: Expanded Edition was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. How People Learn II: Learners, Contexts, and Cultures provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. How People Learn II will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.
