most investment texts. It is also the only graduate Investments text to offer an online homework management system, McGraw-Hill ' s Connect Finance. McGraw-Hill Education  
For undergraduate Corporate

Finance, MBA Finance course, and Financial Economics. This significant new finance text has a broader scope and greater emphasis on general principles than most other introductory finance texts, which typically focus exclusively on corporate finance. This text incorporates Corporate Finance, investments, and institutions. Acclaimed authors Bodie and Merton offer an approach balanced among the three pillars of finance--optimization over time, asset valuation, and risk management. The book encompasses all subfields of finance within a single unifying conceptual framework, and offers the big picture of resource allocation over time under conditions of uncertainty.

*Financial Economics* McGraw-Hill College

*Investments* sets the standard as a graduate (MBA) text intended primarily for courses in investment analysis. The guiding principle has been to present the material in a framework that is organized by a central core of consistent fundamental principles and will introduce students to major issues currently of concern to all investors. In an effort to link theory to practice, the authors make their approach consistent with that of the CFA Institute. Many features of this text make it consistent with and relevant to the CFA curriculum. The common unifying theme is that security markets are nearly efficient, meaning that most securities are priced appropriately given their risk and return attributes. *Investments* is also organized around several

important themes: The central theme is the near-informational-efficiency of well-developed security markets and the general awareness that competitive markets do not offer "free lunches" to participants. A second theme is the risk–return trade-off. Also, this text places great emphasis on asset allocation. Finally, this text offers a broad and deep treatment of futures, options, and other derivative security markets.

For both economists and policymakers, this volume makes a valuable contribution to current research on pensions and the economics of the elderly. The contributors report on retirement saving of individuals and the saving that results from corporate funding of pension plans, and they examine particular aspects of the plans themselves from the employee's point of view.

Steven F. Venti and David A. Wise offer a careful analysis of who contributes to IRAs and why. Benjamin M. Friedman and Mark Warshawsky look at the reasons more retirement saving is not used to purchase annuities. Personal saving through pension contribution is discussed by B. Douglas Bernheim and John B. Shoven in the context of recent government and corporate pension funding changes. Michael J. Boskin and John B. Shoven analyze indicators of the economic well-being of the elderly, addressing the problem of why a large fraction of the elderly remain poor despite a general improvement in the economic status of the group as a whole. The relative merits of defined contribution versus defined benefit plans, with emphasis on the risk aspects of the two types of plans for the individual, are examined by Zvi Bodie, Alan J. Marcus, and Robert C. Merton. In the final paper, pension plans and worker turnover are the focus of the discussion by Edward P. Lazear and Robert L. Moore, who propose pension option value rather than the commonly used accrued pension wealth as a measure of pension value. *Financial Modeling* John Wiley & Sons "Essentials of Investments, Twelfth Edition, is intended as a textbook on investment analysis most applicable for a student's first course in investments.
