Developing Intra-Regional Exchanges Through the Abolition of Commercial and Tariff Barriers / L'abolition Des Barri è res Commerciales Et Tarifaires Dans la R é gion de L'Océ an Indien Peter Lang

There has long been a recognition of the adaptability of Granados' selected piano music to the guitar, starting with the great arrangements of La Maja de Goya and Dedicatoria by Granados' younger contemporary Miguel Llobet (1878-1938) and continuing through the 20th century with numerous arrangers' adaptations of the Doce danzas espa ñ olas.

There may be some validity to the common notion that the success of these adaptations has to do with the essential "Spanish" character in the music manifesting so naturally on the guitar, the essential Spanish instrument. Of course, the guitar has a strong presence in Spanish culture but it can just as readily claim France or Italy as a homeland. Moreover and more particularly, it is the delicacy of texture in the writing that makes adaptation possible and successful. The original score of Valses Po é ticos does not prescribe a transcendental pianism, or put the range and voicing capacities of the piano at the centre of the musical oration. The elegant reserve of the writing, along with some good luck, makes idiomatic arrangement possible and even allows for maintaining the original keys and key architecture in the present

arrangement.

Getting through in business

This book is related to the development of intraregional commercial exchanges in the region of the Indian Ocean. This issue is addressed from an economic as well as from a legal point of view. The

contributions, in English and French, aim to present an overview of the economic, customs-related, technical, legal and cultural restraints that hinder the creation of a free trading area. Cet ouvrage est consacré au développement des échanges commerciaux intrarégionaux dans la région de l'Océan Indien. Cette question est examinée sous un angle politique, économique et juridique. Les différentes contributions, en anglais et en français, visent à établir un état des lieux des freins économiques, douaniers, techniques, juridiques et culturels à la création d'un espace de libre échange.

Grammar for communication

Today we are witnessing dramatic changes in the way scientific and scholarly knowledge is created, codified, and communicated. This transformation is connected to the use of digital technologies and the virtualization of knowledge. In this book, scholars from a range of disciplines consider just what, if anything, is new when knowledge is produced in new ways. Does knowledge itself change when the tools of knowledge acquisition,

representation, and distribution become digital? Issues of knowledge creation and dissemination go beyond the development and use of new computational tools. The book, which draws on work from the Virtual Knowledge Studio, brings together research on scientific practice, infrastructure, and technology. Focusing on issues of digital scholarship in the humanities and social sciences, the contributors discuss who can be considered legitimate knowledge creators, the value of "invisible" labor, the role of data visualization in policy making, the visualization of uncertainty, the conceptualization of openness in scholarly communication, data floods in the social sciences, and how expectations about future research shape research practices. The contributors combine an appreciation of the transformative power of the virtual with a commitment to the empirical study of practice and use. The hardcover edition does not include a dust jacket.

In recent years, social innovation has experienced a steep career. Numerous national governments and large organisations like the OECD, the European Commission and UNESCO have adopted the term. Social innovation basically means that people adopt new social practices in order to meet social needs in a different or more effective way. Prominent examples of the past are the Red Cross and the social welfare state or, at present, the internet 2.0 transforming our communication and cooperation schemes, requiring new management concepts, even empowering social revolutions. The traditional concept of innovation as successful new technological products needs rethinking in a society marked by knowledge and services, leading to a new and enriched paradigm of innovation. There is multiple evidence

that social innovation will become of growing importance not only concerning social integration, equal opportunities and dealing with the greenhouse effects but also with regard to preserving and expanding the innovative capacity of companies and societies. While political authorities stress the social facets of social innovation, this book also encompasses its societal and systemic dimensions, collecting the scientific expertise of renowned experts and scholars from all over the world. Based on the contributions of the first world-wide science convention on social innovation from September 2011 in Vienna, the book provides an overview of scientific approaches to this still relatively new field.
