This volume presents a data-rich description of English inflection and word-formation. Based on large corpora including the Corpus of Contemporary American English and the British national Corpus, it is the first comprehensive treatment of contemporary English morphology that includes both inflection and word-formation. It covers not only well-studied topics such as compounding, conversion, and the inflection and derivation of nouns and verbs, but also areas that have received less scholarly attention, such as the formation of adjectives, locatives, negatives, evaluatives, neoclassical compounds and blends, among many other topics. Equal wieght is given to form and meaning. The volume also contains sections devoted to phonological and orthographics aspects of morphology and to combinatorial and paradigmatic properties of English morphology. It ends with a series of chapters that assess the implications of English morphology for morphological theory, discussing topics such as stratification, blocking and comprtition, the analysis of conversion, and the relationship between inflection and derivation. Winner of the 2015 Bloomfield Book Award and written by three outstanding scholars, this outstanding book will interest all scholars and students of English and of linguistic morphology more generally.

Alan Tippett's publications played a significant role in the development of missiology. The volumes in this series augment his distinguished reputation by bringing to light his many unpublished materials and hard-to-locate printed articles. These books—encompassing theology, anthropology, history, area studies, religion, and ethnohistory—broaden the contours of the discipline. This volume contains two manuscripts. The first, The Integrating Gospel, combines a historical ethnolinguistic study of Fijian language, an examination of Fijian culture patterns in interaction with the church, and Tippett's own firsthand experience as a communicator of the gospel to specific receptors at a specific place and point in time. From this, Tippett is able to extrapolate broader ideas on contextualization and methods of gospel transmission. In The Christian: Fiji 1835-67, Tippett addresses the establishment of the

Christian church and the spread of Christianity in Fiji, with special attention to Ratu Cakobau. In this brief but in-depth study, Tippett presents a strong case against the understanding that Fijian conversions to Christianity were primarily political, as he offers evidence of the genuine religious and spiritual experiences behind these conversions.

Getting to the Roots of Content-Area Vocabulary Level 3 Houghton Mifflin Harcourt
Students often struggle to understand linguistic concepts through examples of language data provided in class or in texts. Presented with ambiguous information, students frequently respond that they do not 'get it'. The solution is to find an example of humour that relies on the targeted ambiguity. Once they laugh at the joke, they have tacitly understood the concept, and then it is only a matter of explaining why they found it funny. Utilizing cartoons and jokes illustrating linguistic concepts, this book makes it easy to understand these concepts, while keeping the reader's attention and interest. Organized like a course textbook in linguistics, it covers all the major topics in a typical

linguistics survey course, including communication systems, phonetics and phonology, morphemes, words, phrases, sentences, language use, discourses, child language acquisition and language variation, while avoiding technical terminology.

This book applies the tools of nanosyntax to the natural language phenomenon of negation. Most work on negation is concerned with the study of sentence negation, while low scope negation or constituent negation is hardly ever systematically discussed in the literature. The present book aims to fill that gap, by investigating scopally different negative markers in a sample of 23 typologically diverse languages. A four-way classification of negative markers is argued for and it is shown how meaningful syncretism patterns arise across those four groups of negative markers in the language sample investigated. The syncretisms are meaningful in that they track the natural semantic scope of negation, and provide support to the idea that morphology is not arbitrary, but points to submorphemic structure.

Consequently, this study leads to a decomposition of the negative morpheme into five privative features: Tense, Focus, Classification, Quantity and Negation proper. Finally, the book argues that sentence, constituent and lexical negation can all be treated in the same module of the grammar, i.e. syntax.
