An Activity-Based Approach Corraini Editore

The design and analysis of efficient data structures has long been recognized as a key component of the Computer Science curriculum. Goodrich, Tomassia and Goldwasser's approach to this classic topic is based on the object-oriented paradigm as the framework of choice for the design of data structures. For each ADT presented in the text, the authors provide an associated Java interface. Concrete data structures realizing the ADTs are provided as Java classes implementing the interfaces. The Java code implementing fundamental data structures in this book is organized in a single Java package, `net.datastructures`. This package forms a coherent library of data structures and algorithms in Java specifically designed for educational purposes in a way that is complimentary with the Java Collections Framework.

With the proliferation of huge amounts of (heterogeneous) data on the Web, the importance of information retrieval (IR) has grown considerably over the last few years. Big players in the computer industry, such as Google, Microsoft and Yahoo!, are the primary contributors of technology for fast access to Web-based information; and searching capabilities are now integrated into most information systems, ranging from business management software and customer relationship systems to social networks and mobile phone applications. Ceri and his co-authors aim at taking their readers from the foundations of modern information retrieval to the most advanced challenges of Web IR. To this end, their book is divided into three parts. The first part addresses the principles of IR and provides a systematic and compact description of basic information retrieval techniques (including binary, vector space and probabilistic models as well as natural language search processing) before focusing on its application to the Web. Part two addresses the foundational aspects of Web IR by discussing the general architecture of search engines (with a focus on the crawling and indexing processes), describing link analysis methods (specifically Page Rank and HITS), addressing recommendation and diversification, and finally presenting advertising in search (the main source of revenues for search engines). The third and final part describes advanced aspects of Web search, each chapter providing a self-contained, up-to-date survey on current Web research directions. Topics in this part include meta-search and multi-domain search, semantic search, search in the context of multimedia data, and crowd search. The book is ideally suited to courses on information retrieval, as it covers all Web-independent foundational aspects. Its presentation is self-contained and does not require prior background knowledge. It can also be used in the context of classic courses on data management, allowing the instructor to cover both structured and unstructured data in various formats. Its classroom use is facilitated by a set of slides, which can be downloaded from www.search-computing.org.

The Swiss, the Gold, and the Dead Johan & Levi Editore

"The novels of Andrea Camilleri breathe out the sense of place, the sense of humor, and the sense of despair that fills the air of Sicily." —Donna Leon A young Don Juan is found murdered in front of his apartment building one morning, and an elderly couple is reported missing after an excursion to the ancient site of Tindari—two seemingly unrelated cases for Inspector Montalbano to solve amid the daily complications of life at Vigàta police headquarters. But when Montalbano discovers that the couple and the murdered young man lived in the same building, his investigation stumbles onto Sicily's brutal "New Mafia," which leads him down a path more evil and far-reaching than any he has been on before.

Arte Programmata cinquant'anni dopo McGraw-Hill Education

A cinquant'anni dalla prima mostra di Arte Programmata (Milano, 1962), l'autore propone una riflessione su ciò che resta di un esperimento di neoavanguardia che ha tentato di coniugare teoria della percezione e produzione industriale. Voluta da Bruno Munari, presentata da Umberto Eco, sponsorizzata dalla Olivetti, l'Arte Programmata non è solo un movimento

italiano riconducibile al più vasto mondo dell'arte cinetica, ma un vero e proprio tentativo di definizione del campo dell'arte, ai tempi della società industriale e cittadina, che muove dal nuovissimo concetto – per allora – di “programmazione”, attorno a cui ruotava tutto il dibattito interno agli intellettuali vicini alla Olivetti, che proprio in quegli anni era all'avanguardia nel campo dei piccoli processori elettronici. Superato un lungo periodo di oblio e di silenzio, oggi l'Arte Programmata gode di nuovo favore, e di un rinnovato interesse critico, storico e di mercato: perché sta avvenendo ciò? Cosa rende ancora attuale quel movimento? Quale movimento di nostalgia e di “revival” riesce a innescare tutt'oggi? Un'agile riflessione che passa senza soluzione di continuità dagli anni Sessanta ad oggi che cerca di dare una risposta alle ragioni di questo successo, e contemporaneamente indaga sulle possibilità di un'utopia legata al concetto di “arte industriale”, mentre riflette su quella definizione di “arte”, il vero motivo che è riuscito a trascendere il mezzo secolo che ci separa dalla sua prima uscita.

Il presente volume affronta le problematiche connesse all'analisi dei cambiamenti d'uso e copertura del suolo (Land Use/Land Cover changes) ed alla comprensione delle dinamiche di trasformazione del territorio agroforestale. L'approccio metodologico, basato sulle tecnologie di Telerilevamento e GIS, è stato sviluppato attraverso un caso applicativo finalizzato allo studio delle suddette dinamiche verificatesi, nell'arco di un cinquantennio, nell'area della “Conca di Avellino” in Campania.

Nell'odierno contesto storico culturale, le indagini di polizia giudiziaria sono state inevitabilmente condizionate in modo positivo dalla crescente evoluzione tecnologica. Oggi è possibile disporre di nuovi strumenti e procedure investigative sempre più snelle, attraverso le quali si cerca di dare quella necessaria risposta degna di un sistema giustizia attento e puntuale. L'utilizzo delle tecnologie informatiche anche negli ambiti della pubblica amministrazione, adeguatamente supportate da specifici interventi normativi, va di fatto ad intrecciarsi con le tradizionali logiche cognitive ed operative tipiche degli operatori di polizia giudiziaria attraverso un significativo processo di integrazione graduale e naturale.

This book explains strategies, techniques, legal issues and the relationships between digital resistance activities, information warfare actions, liberation technology and human rights. It studies the concept of authority in the digital era and focuses in particular on the actions of so-called digital dissidents. Moving from the difference between hacking and computer crimes, the book explains concepts of hacktivism, the information war between states, a new form of politics (such as open data movements, radical transparency, crowd sourcing and “Twitter Revolutions”), and the hacking of political systems and of state technologies. The book focuses on the protection of human rights in countries with oppressive regimes.
